

Critical Minerals

Author :	A.B.K. Prasad
ISBN 13 :	978-93-09430-10-7
ISBN 10 :	93-09430-10-9
E-ISBN 13 :	978-93-09430-10-7
Edition :	First
Pages :	96
Type of book :	Paperback
Year :	2026
Language :	English
Publisher :	Khanna Publishing House
M.R.P :	Rs 198.00
Categories :	Metallurgical Engineering
Condition Type :	New
Country Origin :	India

Product Description

The global transition from fossil fuel energy to green energy heavily relies on critical minerals containing lithium, nickel, cobalt, copper and Rare Earth Elements (REEs). Critical minerals provide a comprehensive guide to these essential resources, detailing their geological occurrence, mining techniques and processes. It highlights their indispensable role in manufacturing modern technologies from electric vehicle (EV) batteries, wind turbines to advanced digital electronics and strategic defence systems. Beyond the technical aspects, the book critically examines the geopolitical landscape, addressing market monopolies, price volatility, and supply chain uncertainties. It also sheds light on the environmental concerns of mining and India's strategic push for self-reliance through the National Critical Mineral Mission. Written with clarity, it serves as a highly useful resource for university students pursuing engineering, geology, metallurgy, and material sciences, as well as industry professionals navigating this vital sector.

Salient Features

- Strategic Classification:** Classifies critical minerals based on economic importance and global supply
- Rare Earth Elements:** Covers the occurrence and complex chemical extraction processes of REEs
- Lithium Processing:** Details advanced extraction techniques from hard rock pegmatites and continental brines
- Analytical Methods:** Explains the use of advanced analytical instruments like ICP-MS, XRF, and LIBS for precise elemental analysis and mineral identification
- Green Energy:** Explores the use of critical minerals and their compounds in EV motors, wind turbines, and solar panels
- Geopolitics:** Analyses international trade policies, market monopolies and supply chain vulnerabilities
- India's Initiatives:** Details the National Critical Minerals Mission and domestic resource potential
- Environmental Impact:** Discusses the ecological footprints of mining and processing operations and need for sustainability.

Table of Contents

1. Critical Minerals (Definition) 2. The resources and Applications of Rare Earth Elements. 3. resources and importance of Lithium 4. Critical and Strategic Minerals for Green Energy and National Security 5. India's present Status and Future Prospectives of Critical Minerals.

Author

Mr. K.S. Raju

He retired as Controller General of Indian Bureau of Mines and was also holding additional charge as Director of Jawaharlal Nehru Aluminium Research and Design Centre (JNARDDC). He did M.Tech in Applied Geology and received advanced training in mineral characterization studies under Colombo plan in Australia and under UNDP study programme in USA and Canada. He has 36 years of experience in mineralogy, mineral characterization, mineral beneficiation and mining.

Dr. G. Siva Kumar

He retired as Sr. Scientific officer from Mineral Processing Laboratory of Indian Bureau of Mines. He did Master of Applied Science (MASc) in Mineral Processing from Karnatak University. He holds M.Tech and PhD degree in Mineral Engineering from prestigious institute, Indian School of Mines, Dhanbad. He has a long experience in the field of mineral processing especially in conducting pilot plant studies on a number of ores such as sulphide ores, iron ores, phosphate ores, gold ores etc.

Mr. A.B.K. Prasad

He retired as Sr. Scientific Officer from Mineral Processing Laboratory of Indian Bureau of Mines. He did M.Sc in Geology from Vikram University, Ujjain and Applied Geology from M.S University, Baroda. He has nearly 35 years of experience in mineral identification, analysis and mineral processing. He carried out mineral beneficiation studies on a variety of ores and minerals
