Mastering MERN(Full-Stack Web Development Simplified)

Author :	K. Ulaga Priya, Thilakavathi P.
ISBN 13 :	978-93-09430-00-8
ISBN 10 :	9309430001
E-ISBN 13 :	978-93-09430-00-8
Edition :	First
Pages :	116
Type of book :	Physical
Year :	2026
Language :	English
Publisher :	Khanna Publishing House
M.R.P :	Rs 298.00
Categories :	Emerging Technologies, Computer Science Engineering, Book Store, New Arrivals
Condition Type :	New
Country Origin :	India

Product Description

Welcome to Mastering MERN: Full-Stack Web Development Simplified. This book provides a seamless, structured journey into building dynamic, single-page applications (SPAs) using MongoDB, Express.js, React.js, and Node.js. Its core purpose is to bridge the gap between front-end and back-end technologies, empowering you to build end-to-end applications using a single programming language: JavaScript.

Readers will establish a strong foundation in JavaScript before diving into backend data management with MongoDB and Mongoose. The journey continues with front-end UI development using React, followed by constructing robust RESTful APIs with Node.js and Express.js.

Designed for students, aspiring software engineers, and professional developers, this book takes you from foundational JavaScript concepts to advanced API construction. It culminates in a hands-on integration of CRUD operations across the entire MERN stack, ensuring your theoretical knowledge translates directly into real-world application development.

Salient Features

• Foundational JavaScript Concepts: Master essential language mechanics, including variables, control flow, array methods, and modern functions, providing a robust base for full-stack logic.

• MongoDB Data Modeling: Utilize Mongoose to design flexible NoSQL schemas, enforce data structures, and handle complex one-to-many or many-to-many database relationships.

• React Component Architecture: Break down complex user interfaces into reusable, self-contained functional or class components while ensuring predictable unidirectional data flow via props.

• State Management Mastery: Efficiently control dynamic application data and handle side effects using modern React Hooks like useState, useEffect, and useReducer.

• Robust Backend Development: Leverage the event-driven, single-threaded, and non-blocking I/O model of Node.js to create highly scalable, performant server-side architectures.

• RESTful API Construction: Simplify server logic using Express.js to seamlessly manage middleware, process form data, and route varying HTTP requests and responses.

• Full-Stack CRUD Integration: Bridge the gap between distinct technologies by building a fully functional application that integrates a React frontend with a backend API.
